```
//This function takes in two int pointers and sorts them
```

```
//It sorts them into increasing order
```

```
void sort2(int* p, int* q) {
```

```
    if (p* > q*) {
```

```
        int temp = p*;
```

```
        p* = q*;
```

```
        q* = temp;
```

```
    }
```

```
}
