//This function takes in an array of integers and its length
//as parameters and reverses the order of the elements
//in the array
//It doesn't return anything, it modifies the array

void reverse(int[] arr, int size) {
    int[size] rev;

    for (int i = 0; i < size; i++) {
        rev[i] = arr[size - i - 1];
    }

    for (int i = 0; i < size; i++) {
        arr[i] = rev[i];
    }
    return;
}
```
